UCIe™
(Universal Chiplet Interconnect Express™)

Building an open ecosystem of chiplets for on-package innovations

Presented by

Dr. Debendra Das Sharma
Intel Senior Fellow and Chair UCIe Consortium
Meet the Presenter

Dr. Debendra Das Sharma
Chair, UCiE Board
Intel Senior Fellow and co-GM Memory and I/O Technologies, Intel
Disclaimer

The information in this presentation may refer to specification still in the development process. This presentation may reflect the current thinking of various UCIe™ workgroups, but all material is subject to change before the specifications are released.
Agenda

• Introduction to UCIe
• On-Package Interconnects: Opportunities and Challenges
• Universal Chiplet Interconnect Express (UCIe): An Open Standard for Chiplets
• Future Directions and Conclusions
Leaders in semiconductors, packaging, IP suppliers, foundries, and cloud service providers are joining together to drive The open chiplet ecosystem.

JOIN US!
UCIe Consortium is open for membership

• UCIe Consortium welcomes interested companies and institutions to join the organization at the **Contributor and Adopter level**.

• **UCIe** was founded in March 2022, incorporated in June 2022. Two levels of memberships: **Contributor and Adopter**

**Contributor Membership**
- Access the Final Specifications (ex: 1.0, 1.1, 2.0, etc.)
- Implement with the IP protections as outlined in the Agreements
- Right to attend Corporation trade shows or other industry events as determined by the Board
- Participate in the technical working groups
- Influence the direction of the technology
- Access the intermediate (dot level) specifications
- Election to get to the Promoter Class/ Board every year when the term of half the board completes

**Adopter Membership**
- Access the Final Specifications (ex: 1.0, 1.1, 2.0, etc.), but not intermediate level specifications
- Implement with the IP protections as outlined in the Agreements
- Right to attend Corporation trade shows or other industry events as determined by the Board
On-Package Interconnects: Opportunities and Challenges
Moore Predicted “Day of Reckoning”

“It may prove to be more economical to build large systems out of smaller functions, which are separately packaged and interconnected.”*

- Gordon E. Moore

*"Cramming more components onto integrated circuits," Electronics, Volume 38, Number 8, April 19, 1965
Drivers for On-Package Chiplets

- Reticle Limit, yield optimization, scalable performance
  → Same dies on package (Scale-up)
- Increasing design costs at leading edge process nodes
  → Disaggregate dies across different nodes
  → Deploy latest process node for advanced functionality
- Time to Market (Late binding)
- Easily enables Custom silicon for different customers leveraging a common base product
  → E.g., Different acceleration functions with common compute
- Different process nodes optimized for different functions
  → E.g., Memory, logic, analog, co-packaged optics
- High power-efficient bandwidth with low-latency access (e.g., HBM memory)

Source: IBS (as cited in IEEE Heterogeneous Integration Roadmap)
Components of Chiplet Interoperability

- **Chiplet Form Factor**
  - Die Size / bump location
  - Power delivery

- **SoC Construction** (Application Layer)
  - Reset and Initialization
  - Register access
  - Security

- **Die-to-Die Protocols** (Data Link to Transaction Layer)
  - PCIe/ CXL/ Streaming
  - Plug and play IPs

- **Die-to-Die I/O** (Physical Layer)
  - Electrical, bump arrangement, channel, reset, initialization, power, latency, test repair, technology transition

(Example SoC showing two chiplets only)
Design Choice: Seamless Integration from Node → Package → On-die

Enables Reuse, Better User Experience

Same Software, IP, and Subsystem to build scalable solutions offers economies of scale, time to market advantage, and seamless user experience. Innovations at the open slot in board level needs to migrate to package level for multiple usages!
Universal Chiplet Interconnect Express (UCIe):

An Open Standard for Chiplets

Guiding principles of UCIe

1. Open Ecosystem with Plug-and-play
2. Backward compatible evolution when appropriate to ensure investment protection
3. Best power, performance, and cost metrics across the industry applicable across the entire compute continuum
4. Continuously innovate to meet the needs of evolving compute landscape

(Leveraging decades of experience driving successful industry standards at the board level: PCIe, CXL, USB, etc.)
Motivation

Align Industry around an open platform to enable chiplet based solutions

- Enables construction of SoCs that exceed maximum reticle size
  - Package becomes new System-on-a-Chip (SoC) with same dies (Scale Up)
- Reduces time-to-solution (e.g., enables die reuse)
- Lowers portfolio cost (product & project)
  - Enables optimal process technologies
  - Smaller (better yield)
  - Reduces IP porting costs
  - Lowers product SKU cost
- Enables a customizable, standard-based product for specific use cases (bespoke solutions)
- Scales innovation (manufacturing/ process locked IPs)
Key Metrics and Adoption Criteria

**Key Performance Indicators**

- Bandwidth density (linear & area)
  - Data Rate & Bump Pitch
- Energy Efficiency (pJ/b)
  - Scalable energy consumption
  - Low idle power (entry/exit time)
- Latency (end-to-end: Tx+Rx)
- Channel Reach
- Technology, frequency, & BER
- Reliability & Availability
- Cost (Standard vs advanced packaging)

**Factors Affecting Wide Adoption**

- Interoperability
- Full-stack, plug-and-play with existing s/w is+
- Different usages/segments
- Technology
  - Across process nodes & packaging options
  - Power delivery & cooling
  - Repair strategy (failure/yield improvement)
  - Debug – controllability & observability
- Broad industry support / Open ecosystem
  - Learnings from other standards efforts

UCIe - Architected and specified from the ground-up to deliver the best KPIs while meeting wide adoption criteria to drive innovations at package level.
UCIe 1.0 Specification

• Layered Approach with industry-leading KPIs

• Physical Layer: Die-to-Die I/O

• Die to Die Adapter: Reliable delivery
  – Support for multiple protocols: bypassed in raw mode

• Protocol: CXL/PCIe and Streaming
  – CXL™/PCIe® for volume attach and plug-and-play
    • SoC construction issues are addressed w/ CXL/PCIe
    • CXL/PCIe addresses common use cases
      • I/O attach, Memory, Accelerator
  – Streaming for other protocols
    • Scale-up (e.g., CPU/ GP-GPU/Switch from smaller dies)
    • Protocol can be anything (e.g., AXI/CHI/SFI/CPI/ etc)

• Well defined specification: interoperability and future evolution
  – Configuration register for discovery and run-time
    • control and status reporting in each layer
    • transparent to existing drivers
  – Form-factor and Management
  – Compliance for interoperability
  – Plug-and-play IPs with RDI/ FDI interface
UCIe 1.0: Supports Standard and Advanced Packages

(Standard Package)

Standard Package: 2D – cost effective, longer distance

Advanced Package: 2.5D – power-efficient, high bandwidth density

Dies can be manufactured anywhere and assembled anywhere – can mix 2D and 2.5D in same package – Flexibility for SoC designer

One UCIe 1.0 spec supports different flavors of packaging options to build an open ecosystem
UCIe PHY: Bump-out for Interoperability

- UCIe architected with process portability in mind
  - Circuit components can be built with common digital/ analog structures
- Bump-out specified in the specification for interoperability even with future bump-pitch reductions
  - Die rotation and mirroring supported

![UCIe Phy Diagram]

- Fixed beachfront allows for Multi-generational compatibility
- As bump pitches decrease

![UCIe Phy Diagram]
Physical Layer

- Unit is One Module: uni-directional: 1, 2, or 4 modules form a Link
  - 16 (64) SE Lanes for Std (Adv)
  - 1 SE Lane of valid
  - 1 differential pair of forwarded clock
  - 1 lane (SE) calibration - Track
  - Lane reversal on Transmit side
  - Reliability: Spare Lanes in Adv; degradation in Std
  - Supported frequencies: 4, 8, 12, 16, 24, 32 GHz
  - A component must support all data rates up to its advertised maximum data rate for interoperability
  - B/W per module/ dir: 64 GB/s Std, 256 GB/s Adv: Two module gets 2X, 4-module gets 4X

- Sideband: always on; 2 Lanes/ direction @ 800 MHz – data and clock
  - Used for training, debug, management, etc; Leverages depopulated bumps to ensure no extra shore-line

- Valid used for effective dynamic power management
D2D Adapter and Flit Mapping through FDI

- Responsible for packetization
  - Adds Flit Header (2B) and CRC (2B)
- Supported Flit Sizes: 68B and two flavors of 256B
  - Decided at negotiation
- Flit Hdr (2B): Protocol ID (3b), Credit (1b), Flit Ack/Nak management (2b command + 8b sequence number), Rsvd (2b)
- CRC: Covers 128B payload (smaller payloads are 0-extended)
  - Triple bit flip detection guarantee with 16 bits
  - Replay if CRC fails
  - Sample RTL code for CRC provided in the spec

---

(a. 68-Byte Flit – usage CXL 2.0/ PCIe Non-Flit Mode/ Streaming)

(b. 256-Byte Flit – usage CXL 3.0/ PCIe 6.0)

(c. 256-Byte Latency-Optimized Flit – usage CXL 3.0/ Streaming)

(Opt Flit is for better link efficiency to use the unused CRC/ FEC bytes in PCIe/ CXL)
Usage Models for UCIe: SoC at Package level

• SoC as a Package level construct
  – Standard and/or Advanced package
  – Homogeneous and/or heterogeneous chiplets
  – Mix and match chiplets from multiple suppliers

• Across segments: Hand-held, Client, Server, Workstation, Comms, HPC, Automotive, IoT, etc

• UCIe PHY and D2D adapter common
  – PCIe/CXL protocol for plug-and-play
  – Streaming for others (similar to board level connectivity today where scale-up systems are on PCIe PHY)
  – Similar to PCIe/ CXL at board level

Processors: symmetric coherency protocol mapped on UCIe through FDI
Memory: CXL.Mem mapped on UCIe through FDI
Accelerators: PCIe/ CXL mapped on UCIe through FDI
Modem/ RF/ Optical: Raw mode on UCIe
Example Scale-up SoC from homogeneous dies: Large Switch with on-die protocol as streaming over UCIe

- Need large radix CXL switches – challenges: reticle limit, cost, etc.
- UCIe based Chiplets should help with scalable products
- 64G Gen6 x16b CXL links
- UCIe as d2d interconnect – while this is a scale-up CXL switch, a switch vendor may prefer to have their on-die interconnect protocol be transported over UCIe rather than create a hierarchy of switches which will not work for CXL 2.0 tree-based topology

![Small CXL Switch (128 lanes)](image1)
![Medium-sized CXL Switch (256 lanes)](image2)
![Large CXL switch (512 lanes)](image3)

One can construct CPUs (low, medium, large core-count CPUs) from smaller dies connected through UCIe using the same principle. Here the UCIe PHY and D2D adapter will carry the packetized version of internal CPU interconnect fabric.

Ack: Nathan Kalyanasundaram
Example Scale-up Package using Streaming and open-plug-in using PCIe/ CXL

- Transporting the same on-chip protocol allows seamless use of architecture specific features without protocol conversion
- Streaming interface with additional flit formats provide link robustness using UCIe defined data-link CRC and retry

Ack: Marvin Denman, Bruce Mathewson, Francisco Socal, Durgesh Srivastava, Dong Wei
UCIe Usage: Off-package connectivity w/ Retimers

(Use Case: Load-Store I/O (CXL) as the fabric across the Pod providing low-latency and high bandwidth resource pooling/sharing as well as message passing)

Provision to extend off-package with UCIe Retimers connecting to other media (e.g., optics)

(Another example can be multi-terabit networking switches Constructed from UCIe-based co-packaged optics and partitionable networking switch dies connected through UCIe on package)
# UCIe 1.0: Characteristics and Key Metrics

## Characteristics

UCIe 1.0 delivers the best KPIs while meeting the projected needs for the next 5-6 years across the compute continuum.
Ingredients for a broad inter-operable chiplet ecosystem

- **Broad Market Manufacturing, Packaging and Test**
- **Chiplets & Chiplet Based Product Attach Points**
- **Thriving Chiplet Ecosystem**
- **Die-to-Die IPs, VIPs, Tools, and Methodologies**
- **Die-to-Die Open Industry Standards w/ compelling KPIs across wide usages**

**D2D Specs**

- Well-defined Specs
  - (Electrical, Logical, Protocol (e.g., PCIe/CXL), Software, Form-Factor, Management)

**C&I Test Spec**

- Test criteria based on Specs
  - (Test Definitions, Pass/Fail Criteria: Electrical, Logical, Protocol, Software)

**Test Tools And Procedures**

- Test H/W & S/W Validates
  - Test criteria
    - Compliance
    - Interoperability

**Predictable path to design compliance with UCIe**

PASS

FAIL
Summary

• **UCIe Consortium** is incorporated with board elections in June 2022 adding two board members

• **UCIe** is an open industry standard that establishes an open chiplet ecosystem and ubiquitous interconnect at the package level.
  – Tremendous support across the industry with several companies announcing IP/VIP availability
  – Poised to be the interconnect of SoCs the same way PCIe and CXL are at the board level
  – UCIe 1.0 Specification is available to the public [https://www.uciexpress.org/specification](https://www.uciexpress.org/specification)

• UCIe Consortium welcomes interested companies and institutions to join the organization at the **Contributor or Adopter level**.

• **5 Technical Working Groups** (Electrical, Protocol, Form Factor/Compliance, Manageability / Security, Systems and Software) and **Marketing Working Group** driving the technology forward
  – Plenty of innovations happening in the consortium

• **Join us if you have not done so! Learn more by visiting** [www.UCIexpress.org](http://www.UCIexpress.org)
